

## Top 10 Reasons Casinos Choose Synergy for Surveillance

### 1 Scalable

Synergy is engineered to grow with you and last a lifetime. Start with our core solution and easily scale up to meet future requirements.

New cameras, storage, locations, functions, regulations, integrations? No problem! Buy what you need and add as you go.

### 3 Flexible

One size doesn't fit all, so why be shoehorned into someone else's off-the-shelf software?

Synergy is fully customisable to work the way you do. Easily tailor the interface, reports, workflows and user permissions to align with your unique requirements, staff roles and priorities.

### 4 Efficient

Synergy streamlines routine functions like dubbing and reviews, quickly filters data to highlight suspicious activity, enables collaboration, guides best practices, and tracks everything for analysis. So, when under pressure, operators make the right calls fast.

### 2 Compatible

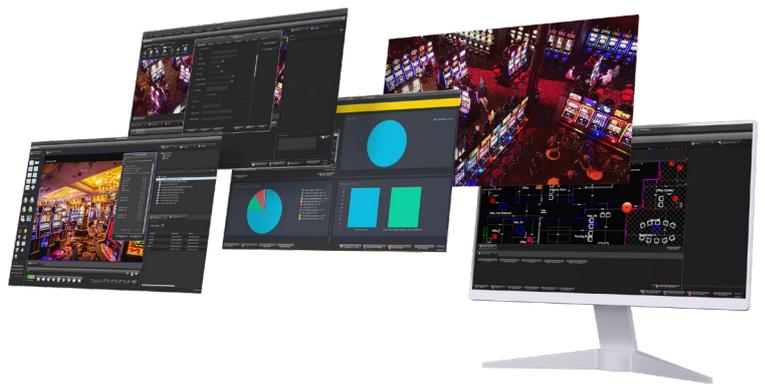

Synergy works with existing cameras and infrastructure to maximise your prior investment.

It also integrates with mainstream IT technology, ONVIF-conformant cameras, access control, gaming systems and many others. So, you're free to use the technology products you like best.

### 5 Reliable

With resilient, multi-layered hardware and software safeguards, Synergy helps you achieve 99.99% uptime performance.

With timely alerts and automated failover, your video is always available when needed most.

**“I don't want to lose sleep at night worrying about potential problems, and working with Synectics, I don't have to. The team has always worked hard to understand our specific needs and develop practical solutions to tackle the challenges we face”**

Casino Cosmopol

## 6 Proven

Our customers sleep well knowing the system they count on monitors and records over 150,000 channels in 100+ of the largest, busiest and most tightly regulated casinos in the world.

You're in good company.

## 7 Secure

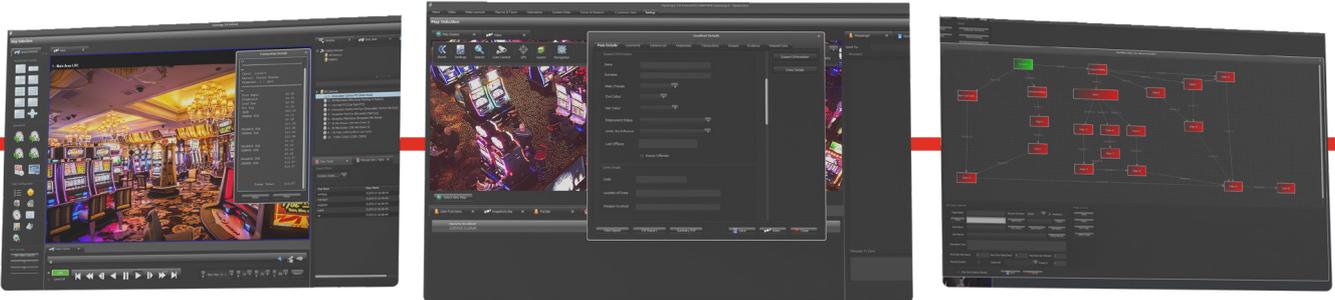

Engineered with cybersecurity in mind, Synergy can be deployed across on-premises, hybrid and cloud environments.

Granular access rights to cameras and data, end-to-end encryption, and fully auditable incident management ensure strict compliance and fidelity.

## 8 Collaborative

Synergy facilitates communication and collaboration between surveillance, security, management and regulators anytime, anywhere via Synergy Web and the Cloud Evidence Locker.

Share video bookmarks, snapshots, handover notes, assigned tasks, evidence case files and live incidents. Combine efforts to make the best decisions.

## 9 Intelligent

With thousands of cameras, alarms and transactions, it's impossible to monitor and track all activity efficiently. Synergy reduces information overload by intelligently "surfacing up" the 1% of video that warrants attention based on user-defined data events, patterns or anomalies.

## 10 Trusted

Synergy is the culmination of 35+ years of software evolution based on our casino customers' needs. Designed with highly regulated, complex, large-scale gaming facilities in mind, it's the most flexible, scalable and reliable integrated surveillance solution available.
